How to play: This is a challenge known as a digraph puzzle. Each place represented like so: represents a unique pairing of two letters. The pairings are numbered the first time they occur and are used (from 01 through 98 in this puzzle), and any time they are reused they will have the same value (i.e. if pairing 12 is "XY" it will be "XY" every time you see 12 marked below a box). To solve this you must first use the contextual and numerical clues to solve what the puzzle says, then use the answers to decrypt the secret message. Good luck!
